case study

Legal & General

New consolidated office space inspires collaboration for relocated workforce

The challenge

Kinly has been working as a dedicated partner to leading insurance provider, Legal & General (L&G), since 2020, providing audiovisual (AV) design, build, and support maintenance services across multiple UK sites.

In 2022, Kinly was asked to develop an innovative AV package for L&G's new state of the art site in Cardiff, working alongside ISG and Hewshott. Through this new site, L&G would consolidate two of its Group offices into a single 120,000 sq. ft facility, enhancing collaboration between employees and clients throughout the Welsh region.

The move would see 1,800 L&G employees relocating into a modern, eight storey office within Cardiff's Interchange building, neighbouring a range of businesses including Kinly clients, the BBC and HMRC.

In line with Legal & General's wider commitments to ESG, their fit out will target net zero carbon commitments and reduced embodied carbon throughout the base build as well as targeting Well Gold and BREEAM standards. These goals played an important role in how Kinly approached the delivery of the project.

The solution

Kinly delivered a full AV package spanning all eight floors, with the aim of **transforming** how employees, customers and partners work together.

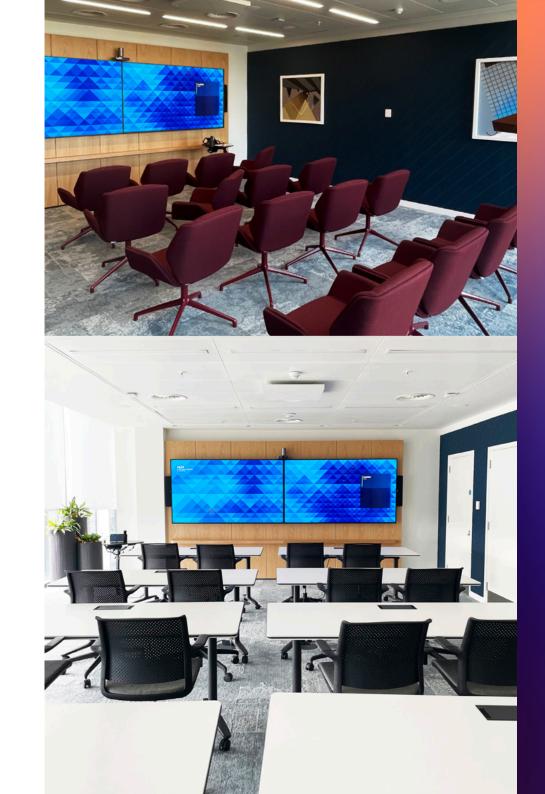

Larger spaces include a Town Hall and 3-way Divisible room with further floors providing Training rooms, BYOD pods, Pitch rooms and Yealink Microsoft Teams Rooms for meetings.

The reception space featured a 109" 1.2mm Leyard video wall alongside a 100" Sony display for digital signage communications which was expanded throughout the floors on displays and wayfinding totems using Sony displays and a Onelan signage platform.

The Town Hall space includes a projection solution from Epson coupled with a repeater display and multiple Yealink cameras to enable remote participation. QSC column speakers and Sennheiser microphones ensure audio clarity which can be managed via a QSC touch panel.

The 3-way Divisible space encompasses three standard Yealink Teams rooms which can combined to create a much larger Teams space to cater for various meetings and events. In full open mode dual 85" displays are utilised alongside the standard meeting room displays which act as repeaters. Ceiling mics, speakers and presenter camera are then activated via the in-room QSC touch panel.

The dedicated training rooms feature dual 85" Sony displays, Yealink Teams solutions, Sennheiser TeamConnect2 ceiling mics along with QSC Core DSP and ceiling speakers. The Pitch rooms mirror this with single displays whilst the BYOD Pods provide dual Sony displays and a Yealink video bar for simple connectivity.

The **result**

Kinly successfully implemented the comprehensive AV package into the Interchange for L&G, playing a pivotal role in the formation of the new state-of-the-art facility for the company which maximises the potential for collaboration as well as enhancing the user experience.

Alongside the AV implementation, Kinly provided a week of user adoption and onsite training services, an ongoing service contract as well as providing an engineer permanently onsite for one month following the install for enhanced support.

Through this training and support, L&G has been able to ensure that even the most advanced and innovative technologies are being used regularly and to their full capacity for maximum workplace impact.
